ATIDIUM

Payment & Budget Management Decentralized App
Leveraging the Blockchain, Cryptocurrency and AI Technologies

WhitePaper

Version 2.0, August 2018

Atidium is a cryptocurrency created as a resource to better manage your budget.

You will get 100% control for your payments thanks to
smart contracts that you can create in less than a minute!
You will get 100% control for your expenses thanks to
artificial intelligence engine that will teach you how to
manage your budget easily.
It is ideal for anyone from individuals and families
to small businesses and large corporations.
As an easy-to-use money management system,
Atidium can be used all around the world.

Visit our website www.atidium.io and join us now.

"

Here's to the crazy ones. The misfits. The rebels.
The troublemakers. The round pegs in the square holes..
The ones who see things differently. They're not fond of rules.
And they have no respect for the status quo.

You can quote them, disagree with them, glorify or vilify them.
About the only thing you can't do is ignore them.

Because they change things.
They push the human race forward.
While some see them as the crazy ones, we see genius.

Because the people who are crazy enough to think
they can change the world, are the ones who do."

"

Disclaimer

The purpose of this White Paper is to present ATIDIUM and the ATD token to potential token holders in connection with the proposed Airdrop. The information in this White Paper is to provide relevant and reasonable information to potential token holders in order for them to determine whether to purchase ATD Tokens and does not imply any elements of a contractual relationship.

This document is not composed in accordance with, and is not subject to, laws or regulations of any jurisdiction, which are designed to protect investors. The product token is not a digital currency, security, commodity, or any other kind of financial instrument and has not been registered under the Securities Act, the securities laws of any state of the United States or the securities laws of any other country, including the securities laws of any jurisdiction in which a potential token holder is a resident.

While we do our best to ensure that any material in this White Paper is accurate and up to date, such as products, services, technical architecture, token distribution, company timelines - such material could be subject to change without notice and in no way constitutes a binding agreement or the provision of professional advice. In the event of any conflicts or inconsistencies between translations and communications and this official English language White Paper, the provisions of this English language original document shall prevail.

ATD tokens confer no rights in the company and do not represent participation in the company. ATD tokens are not securities. The user acknowledges, understands, and agrees that ATIDIUM tokens are not securities and are not registered with any government entity as a security, and shall not be considered as such.

ATD tokens are not official or legally binding investments of any kind. Risks and uncertainties The ATIDIUM platform is not yet developed and is subject to further changes, updates, and adjustments prior to its launch. Such changes may result in unexpected and unforeseen effects on its projected appeal to users, possibly due to the failure to meet users' preconceived expectations based on this White Paper, and hence, impact its success. For the foregoing or any other reason, the development of the ATIDIUM platform and launch of ATIDIUM future business lines may not be completed and there is no assurance that it will be launched at all.

All parties involved in the purchase of ATD tokens do so at their own risk. The funds raised in the Airdrop are exposed to risks of theft. The Company will make every effort to ensure that the funds will be securely held in block chain wallets. In such event, even if the Airdrop is completed, the Company may not be able to receive the cryptocurrencies raised and ATIDIUM may not be able to use such funds for the development of the ATIDIUM platform. In such case, the launch of the ATIDIUM platform might be temporarily or permanently curtailed. No Cancellation and No Refund All ATD token orders are deemed firm and final. The Client acknowledges that they are fully aware that they will not be entitled to claim any full or partial reimbursement under any circumstances whatsoever.

The Company is not responsible for, nor does it pursue, the circulation and trading of ATD Tokens on the market. Trading of ATD tokens will merely depend on the consensus on its value between the relevant market participants.

No information contained in this white paper should be considered as a promise, representation of commitment or undertaking as to the future performance of the ATIDIUM platform and ATD token.

Introduction by the CEO

Since I started researching the Bitcoin and Blockchain technology in 2013, I realized the enormous potential hidden in the new Crypto world. We are the generation that is experiencing the substantial growth of Crypto currency, right before our eyes.

During my years of research in the Crypto world, I have experienced a variety of areas: physical and cloud mining, trading in various trading arenas, investing in new ICOs, and exploring different aspects of the Blockchain technology.

The more I dove into it, the more I realized the impact it had on the world. After understanding the Blockchain technology, I realized that the problem I had encountered over the years was the same - this technology seems to be available to everyone, but unfortunately not accessible to everyone to learn and understand the next best thing…

I remember thinking a lot about the question:

**"How does technology help humanity, however good it may be,
if a large number of people find it difficult to manage?"**

I found that if the world is really moving to a time when we are less dependent on the different banks and institutions that profit at our expense, than our responsibility for managing money and our budget is so much greater!

We write about it a lot in the White Paper. Today, more than ever, it is important that we know how to manage our expenses and revenues. Those who don't do so will find it difficult to lead a normal life in the new era.

To date, there is not a good tool to help manage our financial budget, and certainly not one that emphasizes the use of third party payment spending.

Fortunately, in the Crypto world we have smart contracts, the ability to convert crypto currencies into existing Fiat money, and the Artificial Intelligence technology to analyze and improve our consumer behavior, but currently, there is no real product that combines all of these ideas together that is accessible to Everyday people.

 At this stage, I consulted with my cousin Shlomit Guy, a doctor of anthropology, about the spending habits of people according to their cultures. I, then, understood the necessity for an open source global money management tool.

Together, with my amazing staff, we decided to take on this challenge.

My three guiding questions were:

1. Can we make all this wonderful technology available to the common users?
2. Will the tools that we create give real value to people?
3. And will the tools still be relevant for another 10 years?

In 2017, we realized that the answers to these questions were reachable and decided to give a green light on creating the company.

After many sleepless nights in which we planned, in detail, how we would produce a winning and accessible product for everyone, we established **Atidium**.

I invite you to go through the White Paper and the wonderful content on our website, and of course contact me, personally, over any questions about Atidium.

Regards,

Eliav Cohen, Co-CEO and Co-Founder

Atidium is a Payments & Budget Management Decentralized Application, Maximizing the Benefits of the Blockchain. We established Atidium for one purpose:

To help people, organizations and companies manage their budget better.

Many people have trouble managing money and controlling their budget.
The reason for this is first and foremost related to our DNA -
we often tend to be overwhelmed by our instincts instead of our actual needs.
These days it is easier than ever for us to waste money that we cannot afford to waste.

We have gathered 5 global facts about the price increase for consumer spending that will explain why it is important to start operating and managing our budget more wisely.

According to a study by Forbes, The Millennial generation spends more money than then they make. 94% of college students complete their degree with student debt

Prices for luxuries today is higher than ever before. Most millennials waste the majority of their money on food, entertainment and gadgets. The fashion and jewelry industries have also increased their prices significantly.

Housing prices in most parts of the world increases significantly every year. Many people leave their hometown due to a lack of funds.

According to research by The Economist, prices of real estate go up at an average of 5.7% each year

According to the JAMA study, in the US alone, health expenses rose a total of 5,933 billion dollars

The global health systems prices are increasing each year due to the massive profits that the pharmaceutical companies are drawing.

The big organizations and companies that run our daily lives, those who provide basic services and derive taxes and other fees are also preventing individual progress.

According to Business Insider's research, in many countries, taxes imposed on civilians are more than 50%

Gordon Moore, one of the founders of the big tech company Intel, predicted in 1965 that because computing power will double every two years, it will boost all other technology

The amount of technological innovation that came along in the 20th century is the largest in human history. It is now easier than ever to spend money we still do not have on luxuries.

We are facing another problem that is just as important as the rise in global prices

The biggest problem we face today is the lack of control over our current expenses.

How many people truly know how much money they spend on food, clothes, luxuries and bills?

In every country where this study was conducted, the answer was always unequivocal:

80% of people have no control over their expenses (as in the Pareto principle).

Be completely honest with yourself and ask, do you know exactly how much money you will put on your credit card this month? Have you cut down on shopping in recent months? How much are you going to pay for electricity and water consumption next month?

The majority of people do not have definite answers to these questions.

Can people, organizations and businesses manage their budget wisely?

We believe that everyone can manage their budget optimally if they stick to these four sets of rules:

1. Educate & Train
2. Future Savings
3. Manage $ Track
4. Setting Goals

What Is Atidium, and How It Will Help You Plan Your Budget

As we have previously stated, we established Atidium to ease the difficulties of humanity in financial budget management.

We provide great solutions for both the private sector and the business sector. In order to implement our goals, we opened an entire trading network on top of EOS blockchain for the trading network we called **Atidium**.

Our token is in the **ATD** symbol.

We're also developing an app that will bring out the wonderful features of this token, which we will discuss in detail on the following pages.

Cryptocurrency Features of ATD

☑ ATD cryptocurrency is EOS-based token and it will generate profits. Half of the profits will be deposited to a rewards pool.

☑ The money from the pool will be rewarded to the app contributors. The remaining amount will be distributed according to the volume used by the token holder.

☑ Atidium's system is built in an open source so that anyone can make changes according to the model that suits them. For Example:

Token Expiration Date – The ability to set a token use and end date according to the conditions of the pre-existing smart contract that has been applied to the token.

Token Value – The ability to organize your tokens use based on color scheme, objective and monetary value.

Token Pre-Conditioning – The ability for the sender to authorize to the receiver how, where and when the token may be used.

The Atidium Mobile Decentralized App

* The tokens on the Atidium network will be managed by a unique application that we have developed. The app will work on all Android and IOS devices and will be available in 10 languages!

* The app will allow every person, any organization or business to manage and spend funds in a smart way. The user will be able to buy ATD tokens through exchanges with other cryptocurrencies like EOS and more.

* After downloading the app you will have an option to join our rewards program as an Atidium Explorer.
  As an Atidium Explorer, the app will ask different questions about the business you are shopping at. To make sure the data we have is accurate you can add information that may be missing.

* Those added businesses will create discounts especially for Atidium users and will be able to highlight their business with many special features from Atidium decentralized app for a small fee.

* Half of the profits will be deposited into a rewards pool. The money from the pool will be rewarded to the app contributors. The remaining amount will be distributed amongst the token holders according to the amount they hold. The rewards pool will be given monthly.
  The only thing you will need to do to claim your reward is to sign in the app and claim your new ATD tokens!

The Regular ATD Token and the ATD Cash Token

The very first question that our investors asked us is: "if you build a payment app and give a new way to pay with cryptocurrency, and it's known that the crypto market is unstable, how can you give the user the confidence that he won't lose all his money, even before he will use the app?"

The answer: The user can convert ATD tokens to **ATD Cash** tokens and lock their current price!

The differences between the two tokens:

ATD	ATD Cash
This is the regular Atidium token	We created this token to give the user the option to lock the price of the tokens
As long as the user leaves it in the regular wallet, its price will be affected by the stock changes.	The app gives the ability to convert an ATD token to an ATD Cash token. Once the user does so, the token price is locked by the fiat currency that the user will choose.
Can be sent from wallet to wallet	**Cannot** be sent from wallet to wallet
It will be traded on the various stock exchanges	It's not a tradeable token, but the user can always convert an ATD Cash token to an ATD token.

Use case:

Joe lives in the US and is planning a trip to Thailand.
He has 1,000 USD worth of ATD tokens and he wants to lock their price.
He converts, easily, his 1,000 USD **ATD** tokens to 31,490 THB **ATD Cash** tokens
He do that with much cheaper conversion fee than the physical change business in his country or in Thailand.

After he came back home, he still has THB 3,149 **ATD Cash** tokens in his Atidium digital wallet.
He convert them again to ATD tokens and still has the budget he needs for next month.

The Ways for Transfer and Use the Tokens

Our app has a variety of payment methods. For the first time in history, a user will be able to transfer his money by **Smart Contact**

The user can set a different kind of values and conditions that the third party should follow to get the payment.
You can read about it in the next pages.

Direct transfer between accounts on the Atidium network. The transactions are very fast and safe.

The Atidium app will use the NFC protocol (near-field communication) to pay in millions cashiers around the world.

Every user will be able to order a debit card with a live sync with his Atidium digital wallet. Our debit card is international so it can be used in almost every country in the world.

The user who hold the Atidium debit card will be able to withdraw his money from millions of ATMs around the world.

The Atidium Debit Card

The Atidium debit card is international and can be used to make online and physical purchases. It can also be used in regular ATMs all over the world.

Our debit card will be sent directly to your home, anywhere in the world, for a nominal fee.

Your debit card will sync with the Atidium app real-time and will convert ATD to the local fiat currency. Every transaction will aim for the lowest possible fee.
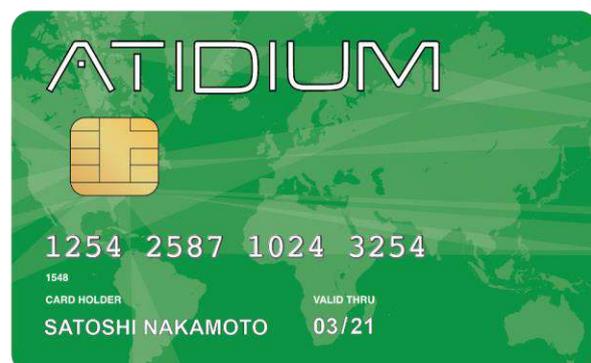

Also, Atidium will create pre-defined card types, holding individual colors for individual needs.

ATIDIUM BLUE
Online Only

ATIDIUM GREEN
Card Ages 21 and below, Full Parental Control

ATIDIUM RED
ATM Only

ATIDIUM PLATINUM
### Card for VIP Costumers

Conversion Model of ATD Main Token

The Atidium Debit Card will work anywhere in the world, as long as the specific country supports transactions with the major credit card companies.

We are currently negotiating with a few major credit card companies. With that said, we will sign an agreement with the lowest transaction fee solution, for the Atidium community.

Our conversion model is simple: Once a request for payment or withdrawal is made in the Atidium app, Your ATD Token will be immediately be converted to the current value of the local currency that you have chosen, and you will be able to use your debit card with ultra-low fees thanks to the amazing world of cryptocurrency and the Blockchain technology.

This is a HUGE benefit for users that travel around the world and want to save unnecessary conversion fees!

Real-Time Currency Conversion

$10 T-Shirt
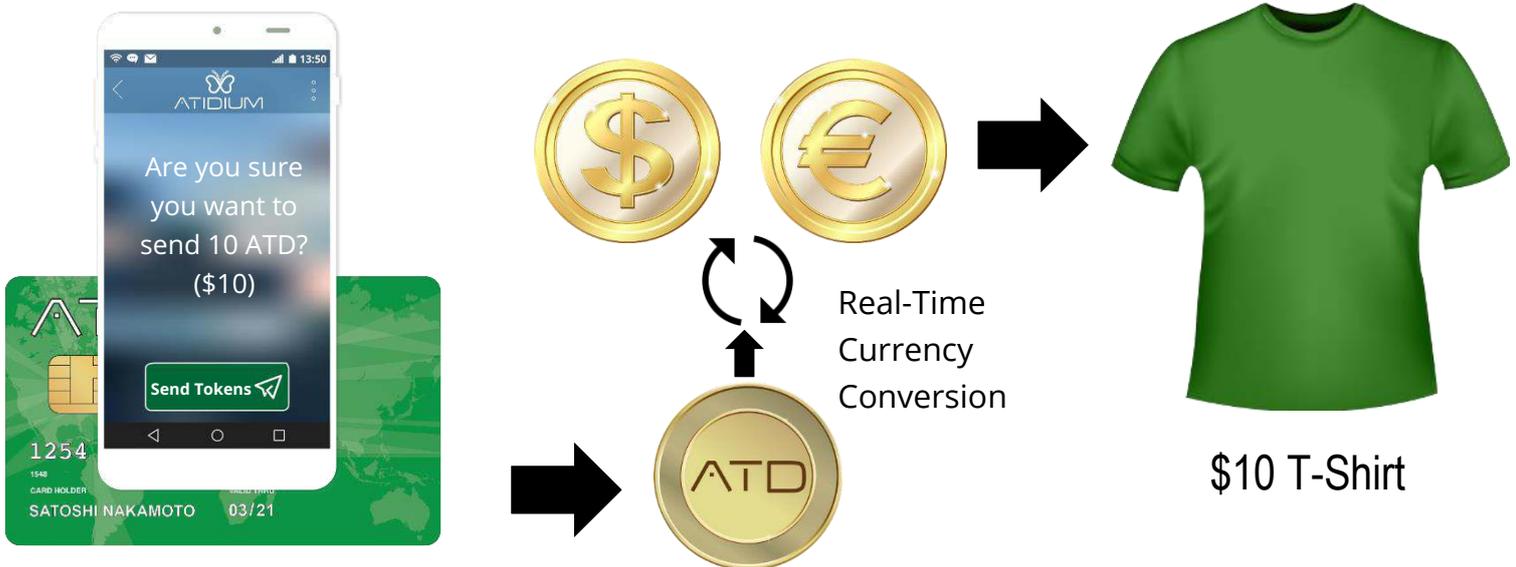

Techniques and Methods Used in the App

To keep the four set of rules (Setting goals, managing and monitoring, saving for the future, education and training) the app will act as a personal account manager for the user, and will offer many features that will ease the user through the process.

In order to develop the application, we have used technologies such as smart contracts on the blockchain network, a multi-level security system to prevent hacking and keep the user's information safe. We have also used the most advanced systems to offer easy access assistance for users.

We have used NLP techniques in the app, as well as social media gamification to improve future budget management.

After purchasing ATD tokens, the desired amount will be added to the app wallet. The user will be able to set characteristics and conditions such as **color, designation, and an expiration date**. Also, the single and total token value will be shown in other currencies such as EOS, BTC, USD, EUR just to help the user understand the value.

For Example: if 1 ATD = 1 USD

500 Green Tokens worth **$500** which are designated for going-out purposes for the next month. (Movie Theater, restaurants, pubs etc...)

2,000 Red Tokens worth **$2,000** which are designated for shopping for electric appliances for your home in 2018.

**This way you can plan your budget in advance and keep track of your expenses in real time.**

The app will know and analyze the colors, statistics, and recommendations for you.

The longer you use the app, the more you can use the statistics and get a better understanding of what you spend and how you can improve your financial planning and budget.

For Example:

"On Mondays you usually spends 20% more on restaurants than other days"

AI Budget Management Advisor
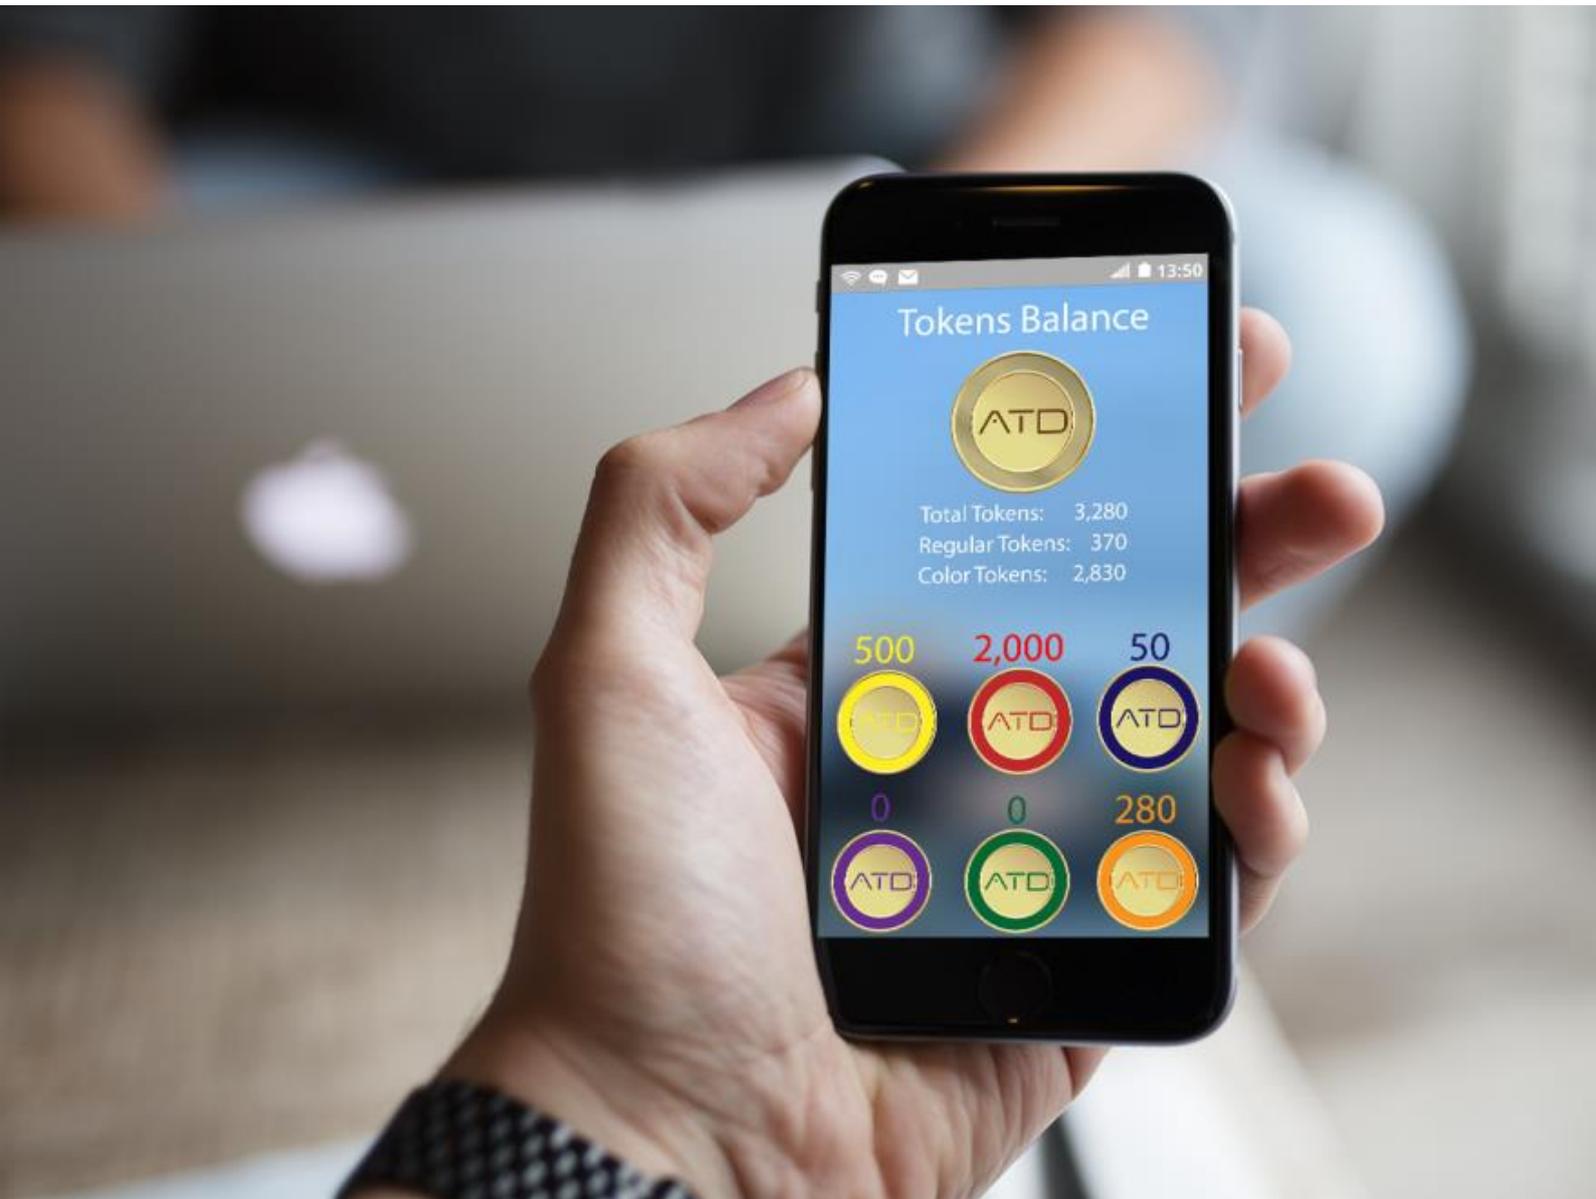

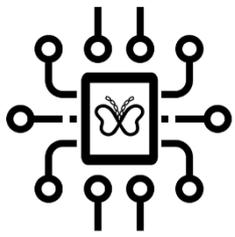

Another key feature, which is in development stage, is our AI Budget Management Advisor. At a touch of a button, the app will be able to learn and advise the user how to manage and improve their day-to-day financial behavior.

The AI Budget Management Advisor can be configured with Push Notifications to give the user real-time tips and alerts.

 For Example:

* Daily / Weekly / Monthly Tips & Studies.

* Upcoming bills notifications (rent, electricity, gym etc...)

* Excess / Exceeded Budget Notifications.

* Current real-time ATD market price.

* We will develop more features in the future.

Suitable AI Budget Management Advisor
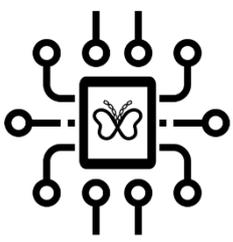

Different societies have different consumer cultures. In order to produce suitable cultural AI advisors, we need to go beyond translating the application into different languages. Our diverse group of advisors will thrive to help each individual by understanding the consumer culture in each society in which the currency operates.

For this purpose, the Research and Development Department will study consumer culture in every market that is applicable. A suitable AI advisor will be designated for each culture or region, based on its accepted values and norms, the way they perceive money, and the relations between parents and children.

 Setting people up with local, culture-based AI advisors will ensure they feel as though the token was created specifically for them. This way the buyers are likely to invest in ATD since we have advisors from all different backgrounds.

That is the power of Atidium.

Thomas, 26, London

Thomas purchased 1,000 ATD tokens and decided to divide them into three sub-currencies:

500 tokens were painted red and designated for dining.
300 tokens were painted yellow and designated for parties.
200 tokens were painted blue and designated for gym payments.

After half a year, Thomas realized that he had spent his entire budget on parties and the gym, and he had no money left. However, he still had 200 tokens to use in restaurants. He chooses to keep the remaining tokens in his wallet for future savings.

**After tracking his expenses, he purchases 1,000 ATD tokens again, this time divided differently:**

300 tokens were painted red and designated for dining.
400 tokens were painted yellow and designated for parties.
200 tokens were painted blue and designated for gym.

He also set aside 100 savings tokens that were combined with the 200 tokens that were not consumed in the first six months.

After using the app for a year:

1. Thomas understood exactly how his budget had been divided.

2. He managed to save money:
   200 tokens were saved
   100 tokens were saved - Total 300 ATD Tokens were saved.

3. Thomas now knows how to plan his budget for next year and even needs to invest less money
   because of the prior years' savings.

Thomas Budget Management in the 1st Half of the Year:
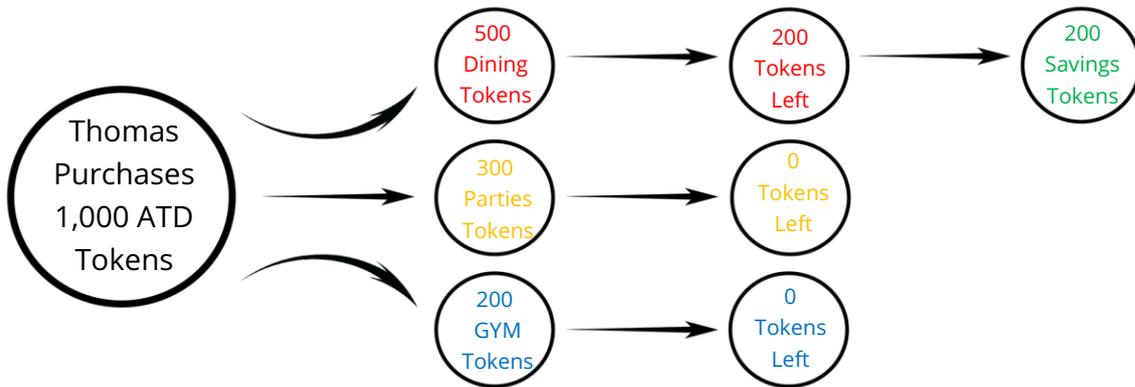

Thomas Budget Management in the Second Half of the Year:
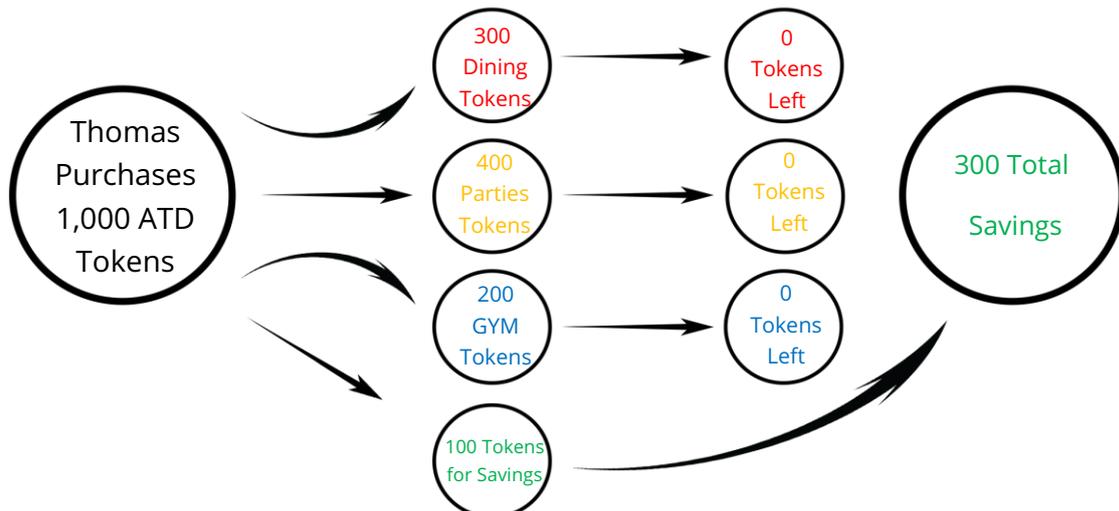

Atidium as a Socio-economic Network

Once you understand how the application helps you be financially sound, let's see how it can strengthen your social connections!

With the many features of Atidium's smart application, you can open an internal social network with people of your choosing. Since you can send ATD currency to another user and only allow it to be consumed **according to the conditions you set**, you are immediately the **CEO** of your social network!

What conditions you can set:

* You can set a goal for how the recipient can use tokens.

* You can set up when the tokens will be valid, just like a coupon.

* You can condition the use of tokens according to the tasks the recipient will be given.

You can also open a shared wallet with several users, each of whom will transfer tokens to it. This will make it easier to raise funds for a house committee, a class, or a gift for another.

The app combines gamification and ratings to encourage the recipient of the token to use it as you set it. If the recipient is successful, he will get a gold star. If a recipient is unsuccessful he will get a black star for failure.

⭐ ★

Use Case #2 - Original Birthday Present

Shivam and Nitin, 32, New Delhi

Shivam purchased 100 ATD tokens and sent them to his good friend Nitin in honor of his birthday.
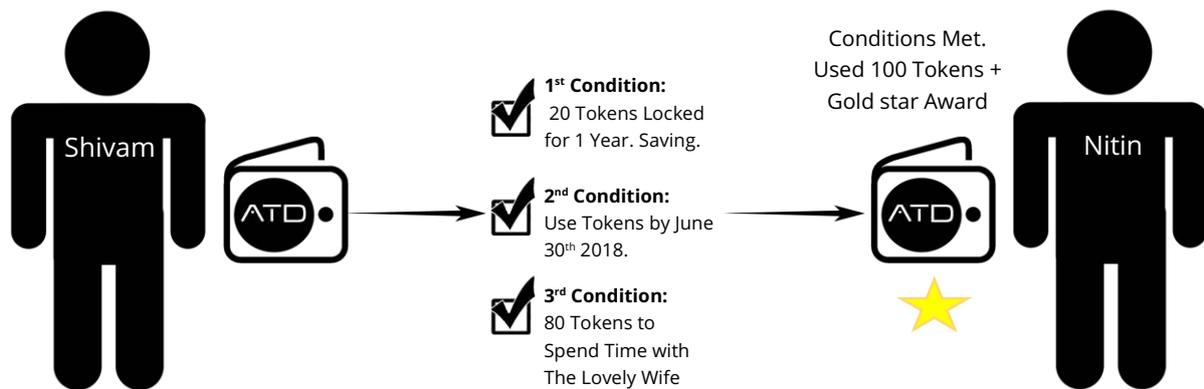

Shivam defined that 20 tokens are to be saved for 1 year. He also defined that Nitin will only be allowed to spend the other 80 tokens during specific dates throughout the year.

In addition, Shivam defined that Nitin may only use the 80 tokens for the purpose of enjoying time with his lovely wife, who he hasn't been spending much time with lately, before a specific date.
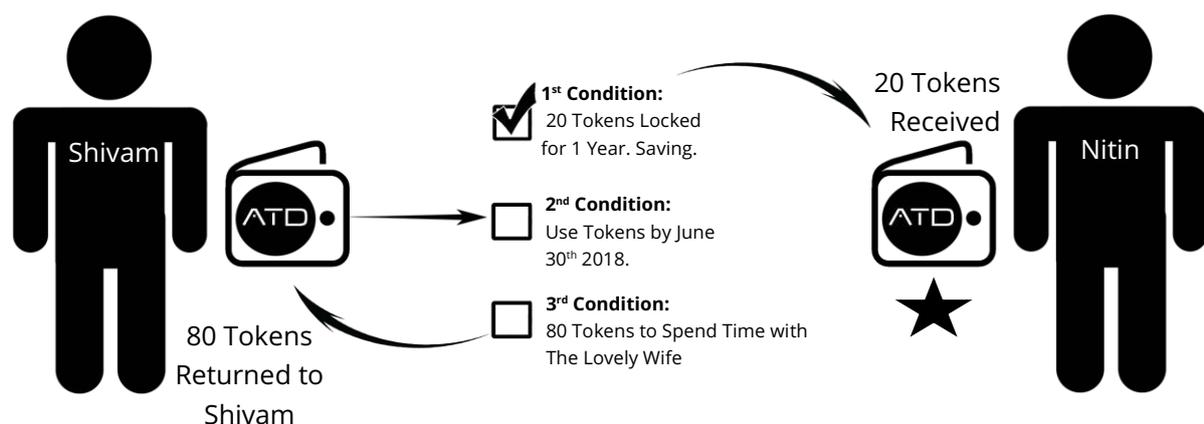

Nitin chose to honor the defined terms and took his wife to dinner within the expected timeframe. Shivam then awarded Nitin with a gold star.
At the end of the year, after the 20 ATD tokens were released from the savings at a higher value, Nitin bought himself a new shirt. All parties were satisfied and Nitin enjoyed the original and thoughtful gift from Shivam!

Scenario #1: Nitin honored the defined terms and therefore received all the tokens + Gold star

Shivam

1st Condition:
20 Tokens Locked for 1 Year. Saving.

2nd Condition:
Use Tokens by June 30th 2018.

3rd Condition:
80 Tokens to Spend Time with The Lovely Wife

Conditions Met.
Used 100 Tokens + Gold star Award

Nitin

Scenario #2: Nitin did not honor the defined terms by not taking his wife out before the deadline and therefore received a black star + the 20 tokens which Shivam had defined as saving for a year. The other 80 tokens, which were kept on the network, were returned to Shivam.

Shivam

80 Tokens Returned to Shivam

1st Condition:
20 Tokens Locked for 1 Year. Saving.

2nd Condition:
Use Tokens by June 30th 2018.

3rd Condition:
80 Tokens to Spend Time with The Lovely Wife

20 Tokens Received
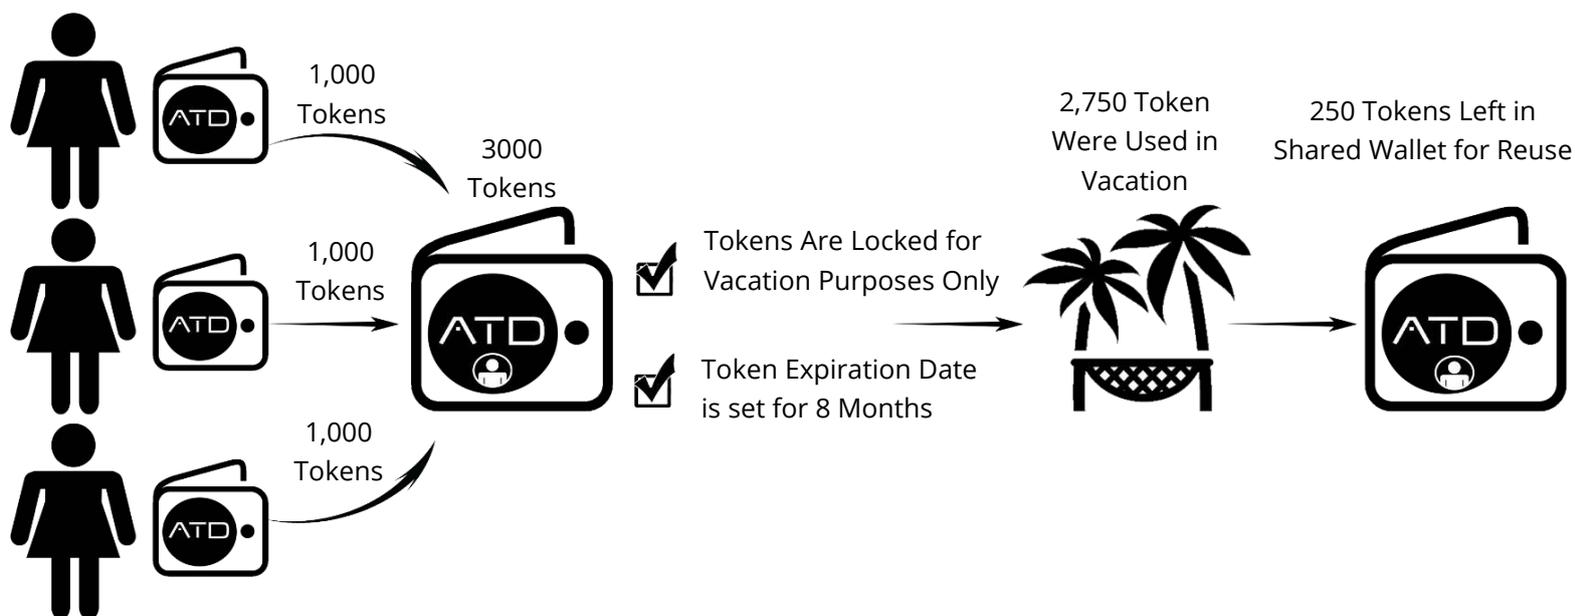

Nitin

Use Case #3 - Friends Vacation Plan

Haruhi, Kaya and Yei, 26, Tokyo

The three friends had been discussing taking a vacation together for many years without success. They decided to do something different this year and use Atidium so there would be no room for excuses.

They opened a **shared wallet** and each of them transferred 1000 tokens from their own wallet.
They determined that they could use ATD tokens only for vacation purposes and only within 8 months.

While the tokens remained in the wallet they **accumulated interest** and increased the mutual fund until the day they chose to use them.

After the vacation, 250 tokens remained in the wallet, and they chose to leave them there for their next vacation.

1,000 Tokens

3000 Tokens

1,000 Tokens

1,000 Tokens

✓ Tokens Are Locked for Vacation Purposes Only

✓ Token Expiration Date is set for 8 Months

2,750 Token Were Used in Vacation

250 Tokens Left in Shared Wallet for Reuse

ATIDIUM

Atidium as a Financial Education Tool for Your Children

The NFEC (Council Educators Financial National) conducted a test that examined the level of awareness that U.S. residents had of their financial assets.

The test was conducted on a group of more than 50 thousand people of different ages, from 50 different countries.

The results of the younger generation were bleak:

Ages 14-10 - Only **38.26%** passed the test, with an average score of **54**.

Ages 15-18 - Only **22.39%** passed the test, with an average score of **60**.

Today, more than ever, we at Atidium believe that an integral part of our children's education is knowing How to manage their money right.

As we explained earlier, it is easier than ever to spend money on luxuries and things that we do not really need. The younger someone is, the less control they possess over their own instincts.

The Atidium application can help you provide a good financial education for your children through a variety of unique features which can be edited according to your needs and your worldview for your children's education.
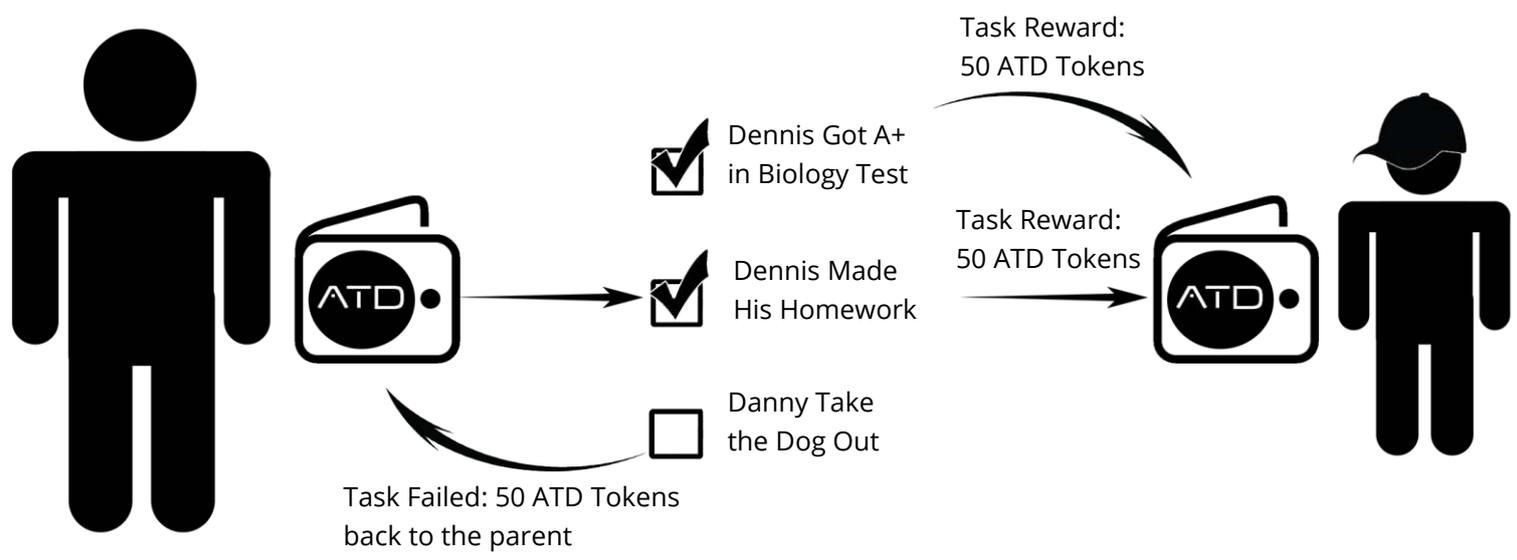

On the next page, we will expand upon the features and bring forth examples accompanied by infographics.
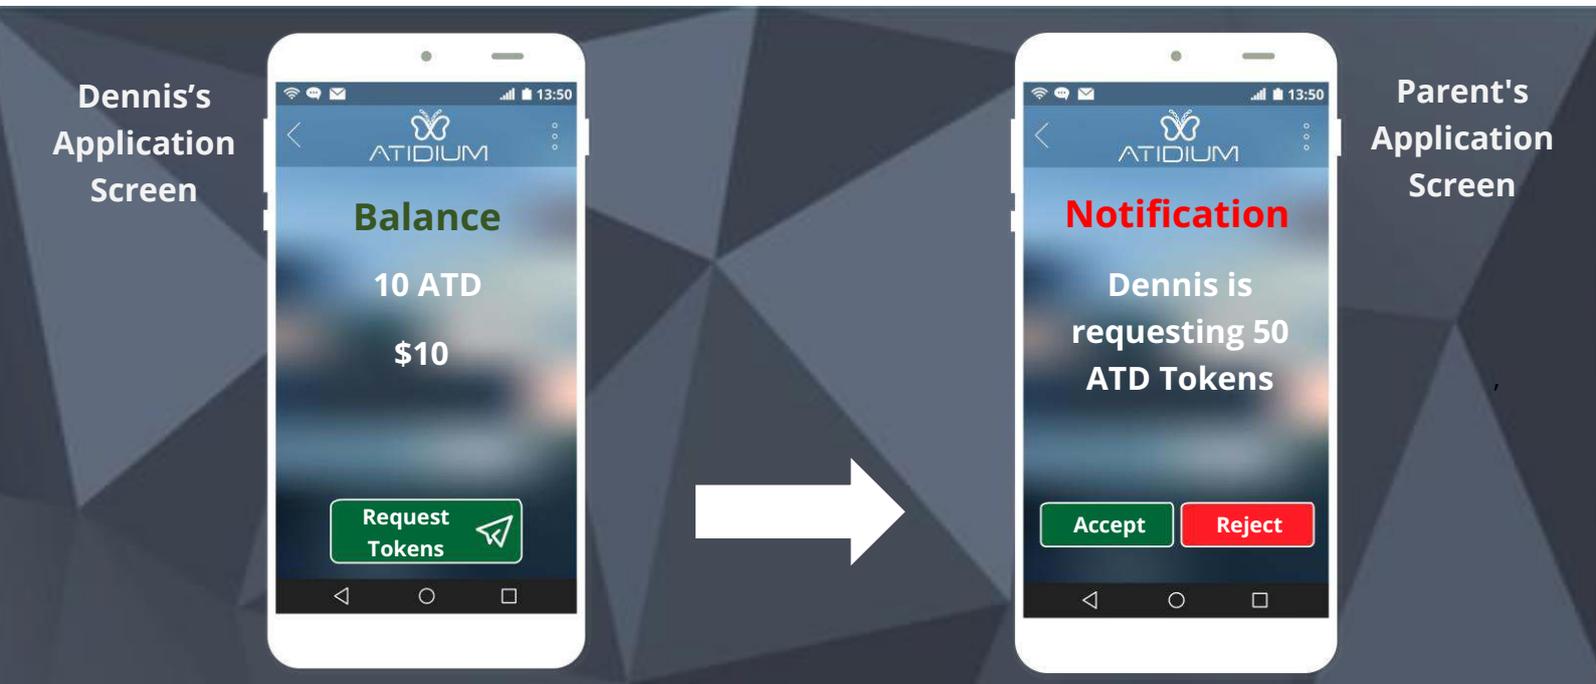

Examples of Use for Financial Education of Children

The application will allow you to define a smart contract that sends your child tokens according to his grades in the school. You can also set up a smart contract that will send your child tokens according to other tasks you assign to him, such as taking the dog for a walk, washing the dishes, babysitting a younger sibling etc.

Use Case #4 - Educational Missions and Rewards

Task Reward:
50 ATD Tokens

Dennis Got A+
in Biology Test

Task Reward:
50 ATD Tokens

Dennis Made
His Homework

Danny Take
the Dog Out

Task Failed: 50 ATD Tokens
back to the parent

* The application will allow you to send tokens to your children and set where they can use them.
 When you do so, you can rest assured that your children are only spending their allowance in places that you
 have approved of and under certain conditions, if desired.

* Once your children have the tokens in their digital wallet, They will help the security of the Atidium network (Delegated-Proof of Stake) and also learn how to save money.

If your child needs additional pocket money and is currently in the store, you can easily send them allowance through the app with a touch of a button. You can reject their request as well.

* Your children will be able to track their expenses and savings using the statistics in the application.

Dennis's Application Screen

Use Case #5 – Supporting Your Student Son

John is supporting his dear son Michael while he is going to college, and gives him a monthly allowance budget. John only allows the allowance to be used to buy food at the college cafeteria, rent at the dorms, and some spare cash.

John is using Atidium to manage his own day to day budget. Michael asked for extra allowance for food twice a month, and with a notification tip from the AI Budget Management Advisor, John decided to add Michael to his Atidium Network and give Michael allowance with specific colors.
This way John will be able to pre-condition the tokens to where they can be used **before he sends them to Michael.**

Thanks to Atidium John can know his dear son Michael is eating and sleeping well.

John → ATD →

☑ 50% can be used only for rent

☑ 40% can be used only for food

☑ 10% can be used in any ATM

→ ATD → Michael

Atidium as a Business Solution

Using Atidium as a method of payment and expense tracking is the perfect solution for businesses as well as local or international organizations.

Our payment method, paints the tokens and sets a designation and expiration date. This helps the organization plan and track its budget in real time.

The employees also benefit from the system, because they have the ability to comfortably track their expenses, as well as take advantage of tokens that they did not use.

This is an option that does not exist as a payment method today.
The employee's ability to refinance funds that they did not use will improve their conduct.

This will also save the employee some of the money he received, which will improve the company's overall morale.

In addition, Atidium provides the possibility for any business to create a wide range of smart contracts that will make it significantly easier to manage current payments.
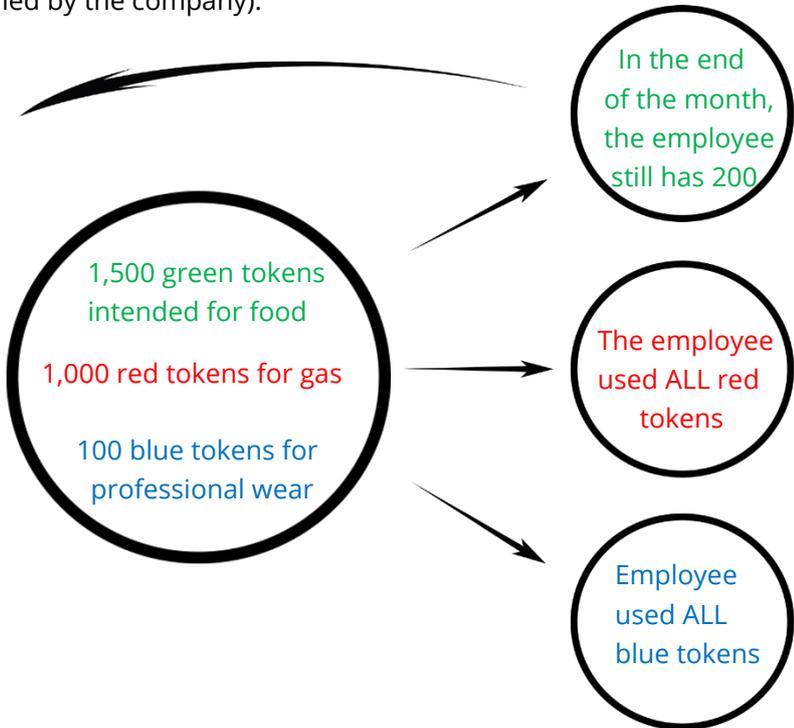

Use Case #6 – Employee Expenses

Step 1.
Company sends monthly budget colored tokens to employee's Atidium digital wallet.

Step 2.
* Employee can returns unused painted tokens to the company and can choose between receiving a regular ATD tokens or different color tokens.

* The conversion can be done only by company and involve pre-defined fees (Defined by the company).

1,500 green tokens intended for food

1,000 red tokens for gas

100 blue tokens for professional wear

In the end of the month, the employee still has 200

The employee used ALL red tokens

Employee used ALL blue tokens

Roadmap

December 2017

The idea of a unique simple blockchain solution, budget management & payment tool for everyone including businesses, families, friends and traders was conceived and Atidium is born.

February 2018

Decision on the EOS blockchain as our new ground for development and deployment of the Atidium Network

June 2018

The Atidium Network is publicly announced.
The Atidium Token (ATD) Airdrop launches.
The ATD cryptocurrency is born.

September 2018

The beginning of the Atidium DApp testing with our alpha version - 'Clementine'.

December 2018

Implementation of the AI Budget Advisor.
The AI Budget Advisor is a unique tool, developed by Atidium Dev Team that will learn our spending\earning behavior and will give us daily tips and missions.

January 2019

Implementation of other Atidium features as shared wallet, immediately allowance transfer between parents to children and the reward system.

February 2019

Beta launch for testers of the Atidium core network and DApp. Open-Source code is released.

March 2019

Official launch of the Atidium network full version DApp.

June 2019

Our focus will be now on the business sector.
We're implementing Atidium Network API by improving the workspace environment for our business partners, we want to make sure our product is being adopted seamlessly and growing naturally, it will be based on user-feedback and will lead to the release of our Atidium API Suite v1.

June 2020

Atidium is now completely Open-Source Decentralized Payment and Budget Application.

Airdrop

The airdrop will be done to all EOS addresses holding EOS in a ratio of 1:1

Exchanges will be added slowly.
This is done in order to ensure an organic growth in the ATD tokens value - limiting the risk of price manipulation by any participant.

Total Token Supply (ATD)

1,500,000,000 ATD Tokens

Frequently Asked Questions

What is an Airdrop?

An airdrop for a cryptocurrency is a procedure of distributing tokens by awarding them to existing holders of a particular blockchain currency, such as EOS, Bitcoin or Ethereum.

What is Atidium?

Atidium is a Payment & Budget Management Decentralized Application, Maximizing the Benefits of the Blockchain. To keep the four set rules, (Setting goals, managing and monitoring, saving for the future, education and training) the app will act as a personal account manager for the user, and will offer many features that will ease the user through the process.

YES.

Ongoing bounty for a year.

Can I work for Atidium?

Yes. Atidium is constantly hiring, expanding and improving. Please send us an email with your information to contact@atidium.io

What problem are you solving?

Most people, organizations and companies have had difficulty managing money and controlling their budget. The reason for this is first and foremost related to our DNA - we often tend to be overwhelmed by our instincts instead of our actual needs. These days it is easier than ever for us to waste money that we cannot afford to waste.

How are you planning to solve this problem?

We provide great solutions for both the private sector and the business sector, The tokens on the Atidium network will be managed by a unique application that we have will develop. The app will allow anyone, any organization, or business to manage and spend money in a smart way.

When I will get my tokens?

The ATD tokens will airdrop automatically, with no further action needs to be done by EOS token holder, to your EOS wallet in June 28th, 2018 in a ratio on 1:1

When will the application be released?

In Q3 2018 we will release our Official Android App including The AI Budget Advisor. Shortly after The Atidium dev team will also launch the official iOS application.

What is the supply limit of ATD tokens?

Total Supply is 1,500,000,000 ATD Tokens. 900,000,000 will be airdropped to EOS token holder, 300,000,000 are reserved for development and marketing, 300,000,000 team.

How can I participate in airdrop?

The tokens will be sent to all EOS token holders in a ratio of 1:1 for free with no action needed by the holder.

In which countries can you use Atidium?

You can use Atidium in any country in the world where the internet is available.
